Anchorage connecting pin

Product number : # RL 6

Description : This connecting screw is made to anchor your dock to dead weight without visible chains – those being attached directly under the dock – this way limiting their access to criminals. However, due to limited access, we do not recommend the use of this kind of anchorage if water level variations are superior to 2’ (0,75 m).

* Also available in beige #RL 7

Anchorage ring for chain

Product number : # RL 10

Description : This stainless steel anchorage ring allows you to attach a chain from the dead weight to the dock. To be installed through an exterior lug connector. The ideal product for salted water plus it gives you the possibility to easily adjust the tension of the

Wall anchorage

Product number : # RL 21

Description : Wall anchorage gives you the possibility of anchoring your dock to a vertical wall. The complete system is made of stainless steel. It can swivel around to follow the wave motion. Mounted on nylon pivots, it is extremely quiet. It will take only a few seconds to unhook your dock from its anchorage point. However, since it is fixed, this system should not be used when there is a water level variation.

You can also use this product to anchor one of our docks, our Jetslide, or any another type of floating dock.

Adjusting Chain

Product number : # RL 11

Description : The adjusting chain is an economical type of anchorage for small installations. It gives you the opportunity to adjust your anchorage easily, so it can adapt to water level variations during the season.

Canpoch

Stainless steel ladder

Product number : # RL 19

Description : Fixed stainless steel ladder with plastic steps.

* Also available in beige #RL 20

Folding ladder

Product number : # RL 12

Description : Folding aluminum ladder with stainless steel hand-rails. It can be folded on itself for security purposes and also to avoid the seaweed build-up.

*Also available in beige #RL 13

Candock's ladder

Product number : # PD CD 01

Description : Ladder entirely made of plastic. It can be folded on itself for security purposes and also to avoid seaweed build-up. This is the only ladder on the market with an upward inclined slope. It can also be installed on a conventional dock.

*Also available in beige # PD CD 02

Outboard engine bracket

Product number : # RL 33

Description : Small outboard engine aluminum bracket. Can be fixed to a platform of Candock's cubes to allow installation of a small outboard motor (10 hp max.) – allowing your platform to be motor-driven.

Diving board

Product number : # RL 8

Description : This is a 6' (2 m) standard diving board that has been adapted for our products. It is fixed to a cube partly filled with cement. It should be installed on the 3rd row of cubes – towards the interior of the dock.

*Available en Gray # RL 8
*available in Beige # RL 9

Candock

4¨ Post cube

Product number : # RL 144

Description : The post cube has a cylindrical opening to fit a 2 7/8¨ diameter galvanized steel pipe needed to anchor your installation. This post is also covered with a 3¨ interior diameter PVC cover and a cap. This is used not only to hide the metal pole but also to give a better plastic on plastic movement with the post cube. This particular type of anchorage is very resistant and allows your installation to follow water level variations. This is the ideal anchorage for tidal areas. Note that this system should not be used in zones where the depth is over 7’ (2,25 m).

* Also available in beige # RL 15

Half post cube

Product number : # RL 16

Description : This half post cube is used with half cubes. The half post cube has a cylindrical opening to fit a of 2 7/8¨ diameter galvanized steel pipe that will be used to anchor your installation. This post is also covered with a galvanised 3” PVC interior diameter and cap. This is used not only to hide the metal pole but also to give a better plastic on plastic movement with the post cube. This particular type of anchorage is very resistant and allows your installation to follow water level variations. This is the ideal anchorage for tidal areas. Note that this system should not be used in zones where the depth is over 7’ (2,25 m).

*Also available in grey #RL 16
*Also available in beige #RL 17

2 7/8¨ Steel post

Product number : # CO T278120-1

Description : Standard galvanized steel post used by Candock for anchorage with the post cube.

CanDOCK

Folding Seat

Product number : # RL 3

Description : A padded, pivoting and folding plastic seat. Can be removed no tools required.

* Also available in beige # RL 4

Stainless steel handrail

Product number : # RL 18

Description : Handrail entirely made of stainless steel. Made in one piece – no welding – reducing risks of damage. Two different height openings giving you the possibility to attach them together. Note that this product is not to be considered as a lifeguard.

Electric winch for Jetslide

Product number : # RL 22

Description : Winch designed to be used mainly with the Jetslide system. It will help launch boats that can not use their own motor power during the process. The winch can also be used to pull your boat onto the Jetslide, if needed.

5/16” Chain / FT.

Product number : # GV IG30516

Description : Candock uses a grade 30 – 5/16” galvanized steel chain for its anchorages.

300 lb (137 kg) dead weights

Product number : # CD PF 26

Description : Candock can also provide – if needed – disk type dead weights with a central opening to pass chains through it. Easy to handle and can be added to increase the anchorage weight.

CanDOCK

1 11/16” Steel post

Product number : # CO T11116140-1

Description : Standard galvanized steel post used by Candock with starting anchorage cubes when you have a small or medium size installation and when the bottom of the lake permits it (not fit for a rocky bottom). We recommend using 2 posts on each side when starting your installation – at a 2-cube distance in between. The top of the posts should be covered with a cap for 1 11/16¨ post for safety reasons.

Cap for 1 11/16” steel post

Product number : # MC 2.5’’X1.5’’X3MM

Description : Safety cap – to be used with 1 11/16¨ steel posts.

PVC covering

Product number : # MB 87.P40030

Description : PVC cover used for 2 7/8¨ posts when you have a post cube for anchorage in your installation.

Cap for PVC covering

Product number : # MB 82.447-030

Description : Cap used to cover the PVC posts. Required when you have a post cube in your installation. We recommend to glue and screw it.

Jetslide’s canopy

Product number : # CD 021

Description : Light weight roof type to avoid your boat being exposed to the elements. You can install or remove it quickly. Unlike many other types of roof, Candock’s canopy is designed to follow the movements of your dock – thus lessening the risk of damage.

Vertical bumper

Product number : # RL 32

Description : Vertical bumper designed to protect your dock as well as your boat when using any of the following: float plane, aluminum or steel boat, and aluminum pontoon.

Storage cube

Product number : # CD 019

Description : Waterproof hatch cube offering you a storage space for various items.

* Also available in beige #CD 020

Jetslide 117¨ stabilizing bar

Product number : # RL 90

Description : Stabilizing bar – to be used with the Jetslide system in order to evenly distribute the total weight of your boat ensuring optimal floating conditions. This 117¨ (2,97 m) bar should be used with 2-cube rows on each side.

Jetslide 155¨ stabilizing bar

Product number : # RL 91

Description : Stabilizing bar – to be used with the Jetslide system in order to evenly distribute the total weight of your boat ensuring optimal floating conditions. This 155¨ (3,94 m) bar should be used with 3-cube rows on each side.

Plastic slide

Product number : # RL 144

Description : Straight line plastic slide of 7’ (2,13 m) in height (yellow or blue). It is very sturdy and does not have any mobile pieces. Fast and easy installation. The surface needed to install it is: 3 cubes x 6 cubes.

* Also available in beige #RL 145

CanDock

PWC winch

Product number : #

Description : Winch to be used mainly with the Jetslide system to help launch your PWC. If needed, this winch can also be used to pull your boat on the Jetslide. It can be installed in front – to pull it – or on the sides – for launch manoeuvres.

Anchorage tail support bracket

Product number : # RL 5

Description : Bracket to fix Dock Edge or similar type of anchorage tails to the Candock's docks.
